## Profile

Computer Engineering student with strong skills in Python, Backend Development, Machine Learning, and Data Analytics. Experienced in building web applications and data-driven solutions using Django, React, MySQL, and modern development tools. Possess a solid understanding of data structures, algorithms, and software engineering principles. Passionate about solving real-world problems through technology and continuously enhancing technical expertise. Seeking an entry-level Software Developer, Python Developer, or AI/ML role to contribute, learn, and grow in a dynamic environment.

## Education

|                                                               |                    |
|---------------------------------------------------------------|--------------------|
| LJ Institute of Engineering and Technology                    | Aug 2023 - Present |
| Bachelor of Engineering in Computer Engineering - CGPA : 9.48 | Ahmedabad, Gujarat |

## Technical Skills

**Languages :** Python, Java, SQL  
**Web Technologies :** HTML, CSS, Bootstrap, JavaScript, React.js, Node.js, Express.js  
**Databases :** MySQL, MongoDB, SQLite  
**Libraries & Frameworks :** Pandas, NumPy, Scikit-learn, TensorFlow, Plotly, Django REST Framework  
**Tools & Technologies :** Git, GitHub, Docker, Power BI  
**Domains :** Machine Learning, Deep Learning, Data Analysis, Backend Development

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                 |
